Advancing Delivery Visibility Tracking in a Complex Supply Chain to Meet Rising Customer Needs

Lotes is one of the world's major suppliers of CPU socket and battery holders, specializing in designing and manufacturing CPU sockets for computers, servers and connectors for computers, mobile devices, automobiles and other components. As business grows and expands into new geographies, Lotes' supply chain has become more complex. Lotes is managing more suppliers and distributors, while at the same time seeking to stay competitive with low operating costs, modern IT infrastructure and efficient business operations. With assistance from Cisco and Intel, Lotes has been working to optimize for SAP S/4 HANA with Intel® Optane™ persistent memory for the company's mission-critical manufacturing and supply chain workload and ERP system.

"We are expecting Intel® Optane™ persistent memory to greatly improve our system capabilities, helping us advance the delivery visibility and tracking that we need. Running SAP HANA and our Cisco HyperFlex system also enables a more efficient, flexible operation and the maintenance system support we need as we continue to grow."

Peggy Chu, Marketing Manager of the Chairman Office, Lotes
