Empowering Students and Teachers with a Digital Learning Solution

Brentwood Academy worked with ViewSonic to develop a new hybrid teaching model in response to the COVID-19 pandemic. The ViewSonic ViewBoard interactive displays powered by Intel Unite® and myViewBoard Classroom with Intel® Distribution of OpenVINO™ toolkit create an adaptable solution that delivers in-person whiteboarding capabilities and the ability to prepare and present from anywhere. Teachers can engage students by importing lessons to the whiteboard, using live annotation, and by adding videos and pictures. myViewBoard then connects that whiteboard experience to students who are distance learning. Students can collaborate online, working on a shared canvas, and they can learn anywhere with lessons that can be recorded and shared on-demand.

“We’re actually able to stay in school right now, which is pretty amazing. The ViewBoard was so critical to this whole system that we have going. What Intel is Doing, and what ViewSonic is doing, is really going to drive new ways of educating students.”
